

Gene Set Enrichment

Enrich gene sets.

Inputs

- Data: Data set.
- Custom Gene Sets: Genes to compare.
- Reference Genes: Genes used as reference.

Outputs

- Matched Genes: Gene that match.

TODO Description.

The screenshot shows the 'Gene Set Enrichment' application window. On the left, there's an 'Info' panel with the message: '6370 unique gene names on input. 1196 genes on output.' Below it are sections for 'Custom Gene Set Term Column', 'Reference' (set to 'Reference gene set (Input)'), and 'Gene Sets' (with a tree view expanded to show 'GO' categories: Biological Process, Cellular Component, Molecular Function). At the bottom left is a checked checkbox for 'Commit Automatically'. The main area is a table titled 'Gene Set Enrichment' with columns: Count, Reference, p-Value, FDR, Enrichment, Genes In Set, Category, and Term. The table lists 40 rows of enrichment results, such as 'cellular_component' with a count of 5292 and a p-value of 2.62e-14.

Count	Reference	p-Value	FDR	Enrichment	Genes In Set	Category	Term
4947	5292	2.62e-14	7.49e-13	1.0	5292	GO, cellular_component	cell
