

Load Kickstarter projects data set.

Let us rearrange the order of columns. Before, months were order alphabetically. Drag and drop them in the right order (from Feb to May).

Pivot Table helps us transform the data into aggregate values. Set Rows to Funded and Columns to Month. Values should be None and Aggregations set to Count. This will output a matrix of funded and not funded projects per month.

Observe funding per month in a Line Plot. Group by Funded to see how the funding changed from February to May.
